

WORLD MOSQUITO DAY

www.airid-africa.com

**Mosquito-borne
diseases continue to
place a major burden
on communities across
Africa. That could
transform our
response.**

This World Mosquito Day, we
recognise the progress
made while looking towards
new tools and approaches

www.airid-africa.com

Genomic Surveillance

Helping us track mosquito populations, pathogens and insecticide resistance, detect emerging threats and respond more effectively.

www.airid-africa.com

Modelling and Data Science

Helping predict transmission, evaluate interventions and support sub-national tailoring of interventions, ensuring that the right tools are deployed in the right places.

www.airid-africa.com

Integrated Vector Control

Combining complementary approaches to tackle multiple mosquito-borne diseases, including malaria, dengue, chikungunya and yellow fever.

www.airid-africa.com

**But Technology alone will
not be enough.**

Progress requires strong
African scientific leadership,
community engagement,
effective regulation and
multidisciplinary
partnerships.

in Infectious Diseases*

**Together, we can end the
threat of mosquito-borne
diseases.**

Bold Science. African-Led. Impact-Driven.
